DryBoost UV

DryBoost UV is a maintenance system for hearing aids and amplifiers, and was designed with rechargeable devices in mind, it accommodates most charging bases so you can recharge your devices while sanitising and drying them at a temperature appropriate for rechargeable devices. The unit also works well with non rechargeable hearing aids.

With a precisely controlled drying temperature that was designed for use with rechargeable batteries, DryBoost UV is a great companion to your hearing instruments. The gentle heat works with a fan to create circulation around your hearing instruments and charging base, pulling the moisture from them, helping to prolong device life, reduce service issues, and increase audio performance.

DryBoost UV also utilises a UV-C lamp to provide sanitisation of your hearing instruments while they are being charged and dried. There is an extra USB output on the rear of the unit, allowing you to charge a phone or other electronic device while your hearing instruments are being cared for inside the unit. DryBoost UV combines drying, sanitising, and charging in a stylish and compact unit.

Accommodates most charging bases.

Key features

- Gentle heat (80°-85° F) for drying rechargeable devices – 6-hr. drying cycle
- UV-C lamp for sanitising – reduces bacteria* during 5-min. cycle
- Unit shuts off automatically at the end of the cycle – batteries will continue to charge until charging is complete
- Additional USB output on rear so you can charge other devices at the same time.
- 1-year warranty

*Reduces 99.9% of bacteria, specifically Staphylococcus Aureus.

ACC504A DryBoost UV

PerfectClean

The first system to clean, disinfect, and dry hearing aids with a press of a button. Vortex cleaning action effectively removes earwax from hearing aid devices, helping to prevent irritation, and maintain optimal performance of hearing aid devices. Easy to refill with a visual indication of the solution level.

Three actions over 90 minutes:

1. Cleaning: earwax removal solution
2. Disinfecting: active anti-bacterial agent + UV-C system
3. Drying: forced-air fan drying system

Earigator Cerumen Management System

Save time, retain your patients, and grow your practice with the Earigator™, the world's most advanced self-contained ear irrigation system. Full temperature and pressure control allows you to safely and comfortably clean out your patient's ear wax in under 30 seconds. Designed by an Otologist, the Earigator™ combines the functions of an otoscope and irrigation into one, providing the most advanced means of cerumen control.

With the Earigator™, nurses and clinicians are fully capable of safely and efficiently removing even the most stubborn ear wax. Self-contained temperature control constantly regulates the water to body temperature, avoiding any caloric or vertigo side effects. Pressure controls ensure that the Earigator™ quickly removes even impacted cerumen, while never endangering the ear drum. Multi-Buy discount available on ACC485C.
